# Wavestore integrates...

Fortecho Asset Management

Main Features of the integration

- Wavestore and Fortecho together provide a best-in-breed solution for video, data and asset management

- Add video to RFID events and benefit from real-time, on alarm and easily searchable post-event viewing

- Easily search for events from any keyword, such as 'asset name' or any other database credentials, and instantly bring up video and backup using Wavestore's 3-click evidential export function from associated cameras

- View video of events in real time, such as 'asset touched' or 'asset moved'

- One screen, total control – Just one operator screen to seamlessly manage events from CCTV, asset management and other integrated technology

- Wavestore is compatible with a host of other best-in-breed third-party equipment allowing flexible camera choice in a range of technology (HD, 360°, thermal), for example, as well as other technology such as Access Control and video analytics.

The integration

Wavestore's VMS perfectly complements Fortecho Aspects ARTS. The integration allows cameras to automatically move, zoom in and focus on the location the moment an asset is touched with pre-event footage automatically displayed to give a complete picture of how the event unfolded. Simultaneously, footage of the event can be sent to key personnel while details of the

alarm and asset in question is overlaid onto the CCTV footage in the control room in real time. Importantly, the whole process is controlled by the Wavestore and Fortecho software providing an extremely robust and reliable solution that does not require any additional hardware.
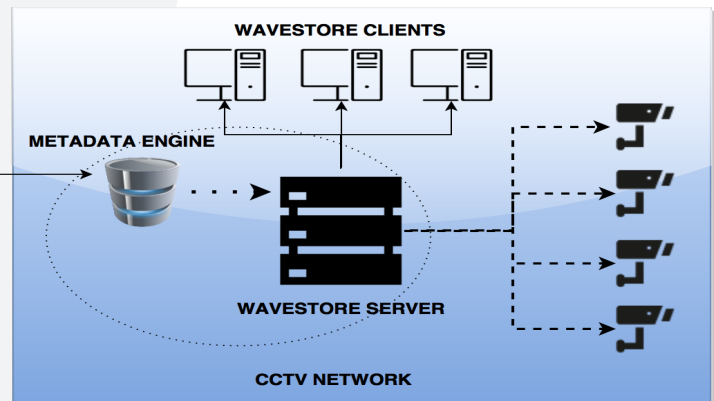

Server side

The Wavestore VMS can be installed on Wavestore's own range of servers, or on a host of compatible third party brands, providing video, data and recording management across the end-customer site. The Foretecho Aspects ARTS server provides full RFID enrolment, administration, control and management across the end-customer site.

On event, data from the Fortecho server is sent to, stored in, and accessed from the Wavestore 'metadata database', which is an option you must include when specifying your Wavestore VMS edition.

Client side

Wavestore's 'WaveView' client software application can be installed on multiple client machines to access the Wavestore server(s). WaveView provides complete live monitoring and playback control of cameras and other devices as well as enabling data from the Foretecho system to be monitored and controlled from the same screen.This allows an operator to view live video, search for events – such as tampering or movement of assets - or manage triggers linked from events either in real time as they happen or via post-event interrogation. Operators are then able to easily stitch together video from time-synchronised events using Wavestore's 3-click evidential export function.

Part of a wider, fully scalable solution

Wavestore's VMS allows other technologies to be integrated into the system, such as Access Control around the site for staff or facial recognition systems for identifying persons of interest, such as pickpockets in a building that is open to the public – this information can even be shared across numerous sites if authorised.

These additional integration possibilities are completely scalable and future proof meaning that the system can grow into the future to protect initial investment.

About Wavestore

Wavestore's truly independent open platform Video Management Software (VMS) enables users to achieve maximum return on investment from their security solution by unlocking its full potential.

Sitting at the very heart of a security system, Wavestore combines powerful 'any source' video, audio and recording management with deep integration across multiple technologies from a wide range of third-party technology providers. These include camera, video analytics, access control, storage and sensors from leading providers, making it possible for users to effortlessly operate, monitor, control and manage a best-in-breed total security solution – all from a single screen.

About Fortecho

Fortecho Technology is an international RFID solution provider with a focus on wireless art protection solutions. Hundreds of museums, national galleries and private collections rely on its Fortecho Aspects ARTS system to monitor for theft, damage and climate change in real time. Designed to fully integrate with security management, intruder detection, TETRA radio and CCTV systems, the Fortecho solution runs 24/7 – even during "visitor hours" when traditional security systems are de-activated.
