# Wavestore integrates...

Intelico Automatic Number Plate Recognition (ANPR)
Main Features of the integration

- Benefit from adding overview cameras to ANPR cameras, providing better situational awareness

- Automate a host of functions, such as open barrier, alert security staff, move cameras etc. for up to 5 number plate lists/groups

- Adds powerful post-event search functionality to ANPR applications

- Open VMS platform that unlocks the full potential of your integrated security solution. Easily add technology such as Access Control, Video Analytics and other devices to your system with ease of user control and administration

The integration

Intelico is able to read number plates from the following countries* :

Algeria	Cyprus	Israel	Slovakia
Argentina	Czech Republic	Italy	South Africa
Australia	Denmark	Italy-Vintage	Spain
Belgium	Ecuador	Italy-Moped	Sweden
Bolivia	El Salvador	Kenya	Switzerland
Brazil	Estonia	Latvia	Turkey
Bulgaria	France	Malaysia	Turkey-inverse
Canada	Germany	Netherlands	United Kingdom
Cape Verde	Greece	Norway	Uraguay
Chile	Guatemala	Peru	Venezuela
Colombia	Honduras	Poland	Vietnam
Costa Rica	Hungary	Portugal	
Croatia	India	Romania	
Cuba	Ireland	Singapore	

* Subject to change, please contact Intelico for the most up-to-date details

Innovation with integrity

Intelico Automatic Number Plate Recognition (ANPR)

Server side

Wavestore VMS servers and the Intelico ANPR system are connected to each other via the network with H.264 video streams from ANPR capture cameras initially streamed to, and recorded by, the Wavestore server and then restreamed to the Intelico system. This negates the need to send two streams from the camera. Data is then pushed from the Intelico system into the Wavestore server when an event occurs – such as when a car number plate is read. This data is sent to, stored in, and accessed from the Wavestore 'metadata engine', which is an option you must include when specifying your Wavestore VMS edition. The data pushed to the Wavestore metadata database by the Intelico system can be associated with any number of cameras, adding powerful visual verification and bringing enhanced operator decision-making to an integrated security solution.

Within the Intelico system, users are also able to define custom groups of number plates, such as VIP or black lists, that can be pushed to the Wavestore server and a total of five groups can have actions associated to them in real time, such as automatically moving a camera, open a barrier or alert security staff, for example. Post event, Wavestore is able to display video from any number of list name searches.

The Wavestore VMS can be installed on Wavestore's own range of servers, or on a host of compatible third party brands, providing video, data and recording management across the end-customer's site. The Intelico system provides full number plate enrolment, administration, control and management across the end-customer site.

Client side

Wavestore's 'WaveView' client software application can be installed on multiple client machines to access the Wavestore server(s). WaveView provides complete live monitoring and playback control of cameras and other devices, as well as enabling data from the Intelico system to be monitored and controlled from the same screen. In addition, it is possible to overlay both individual number plate details and number plate list/group details upon capture to any number of associated cameras. This allows an operator to view live video, search for events or manage triggers linked from access control events either in real time

as they happen or via post-event interrogation. Operators are then able to easily stitch together video from time-synchronised events using Wavestore's 3-click evidential export function.

Users are also able to search for specific number plates or number plate groups via WaveView, to quickly bring up event lists and associated video, incorporating IF, AND, OR functionality to search for number plates that have entered a specific entrance, for example.

Intelico Automatic Number Plate Recognition (ANPR)

About Wavestore

Wavestore's truly independent open platform Video Management Software (VMS) enables users to achieve maximum return on investment from their security solution by unlocking its full potential.

Sitting at the very heart of a security system, Wavestore combines powerful 'any source' video, audio and recording management with deep integration across multiple technologies from a wide range of third-party technology providers. These include camera, video analytics, access control, storage and sensors from leading providers, making it possible for users to effortlessly operate, monitor, control and manage a best-in-breed total security solution – all from a single screen.

About Intelico Accuplate

Accuplate's advanced recognition engine provides industry leading accuracy and speed for vehicle access control. Integration is seamless with most major camera and hardware manufacturers and provides total controllability via the simple to use operator interface.

The system is designed to handle the challenges that face an ANPR system such as weather, damaged plates or foreign characters, poor lighting in covered environments, tailgating and speed or angle of approach.
